

DVC Installation

Before installing DVC, it is recommended to create a new virtual environment.

Step 1: Create a new conda environment

```
conda create -n dvc_env python=3.8
```

Step 2: Activate the created conda environment

```
conda activate dvc_env
```

Step 3: Install DVC

```
pip install dvc
```

Step 4: Check installed version of DVC

```
dvc - -version
```

For details of installation as per your operating system please do refer below link.
